

### **Containment in the Production of Polluting or Degradable Environmental Waste:**

- .- We renounce the use of individual packaging as much as possible in favor of bulk.
- .- We use returnable glass instead of plastics, cardboard, etc...
- .- We avoid the use of "throwaway" products
- .- We do not consume toilet paper or colored napkins.
- .- In some cases, current products will continue to be used until they are finished in our warehouses.

### **Water Supply and Saving Measures:**

- .- We change towels and sheets selectively in the rooms as indicated by the clients.
- .- We carry out analytical control of the drinking water and the pool on a daily basis.
- .- The new toilet cisterns and those that we replaced due to breakdowns are already partial discharge.
- .- We use the drip irrigation system as much as possible.

### **Floors and Lingerie:**

- .- Both to clean the rooms and to wash clothes; we avoid the use of contaminating products as much as possible.
- .- There is a dispenser in the sink faucets, (not in the shower heads)
- .- We rationalize water consumption, especially in the Laundry, by not activating washing machines that are not completely full of clothes.
- .- We store cleaning and washing products in independent warehouses without grates on the floor, so as not to pour them into the sewer in case of spills.

### **Environmental information and activities:**

- We inform the Hotel staff of the convenience of these measures.
- We also inform our esteemed clients and in some cases, we ask for their collaboration.

### **Kitchens and Restaurants:**

- The cooks wash the vegetables in saucepans.
- Cooks do not use water to defrost food.
- We use bulk products instead of individual portions progressively until their total elimination.
- We promote the use of natural, fresh and seasonal products and if possible, produced in our area.
- We include regional or typical local dishes in all menus.
- We offer vegetarian menus.

### **Energy Saving Measures:**

- Low consumption lamps in all public areas and where possible inside the rooms.
- The rooms have a main switch for the electrical circuit (except minibar/refrigerator).
- There are automatic switches in public facilities that allow it.
- Twilight lights in outdoor areas that activate and deactivate with clarity.
- Installation of photovoltaic panels that generate 100% clean, inexhaustible and renewable energy. Protect our planet from climate change: Collect and use the sun's rays to reduce the use of fossil fuels, eliminate greenhouse gas emissions and progressively reach energy self-sufficiency.
- We ask guests and staff to collaborate in saving energy.

### **Business management:**

- We check water and energy consumption per client and night of each of the Hotels to compare them with already established averages.
- We use non-polluting cleaning and gardening products as much as possible.
- We store polluting waste in an independent place and without a grate on the floor.
- A specialized company takes care of the removal of polluting waste.
